# New Features in Trackit Plus v2.8.4.7

LOCKSCREEN
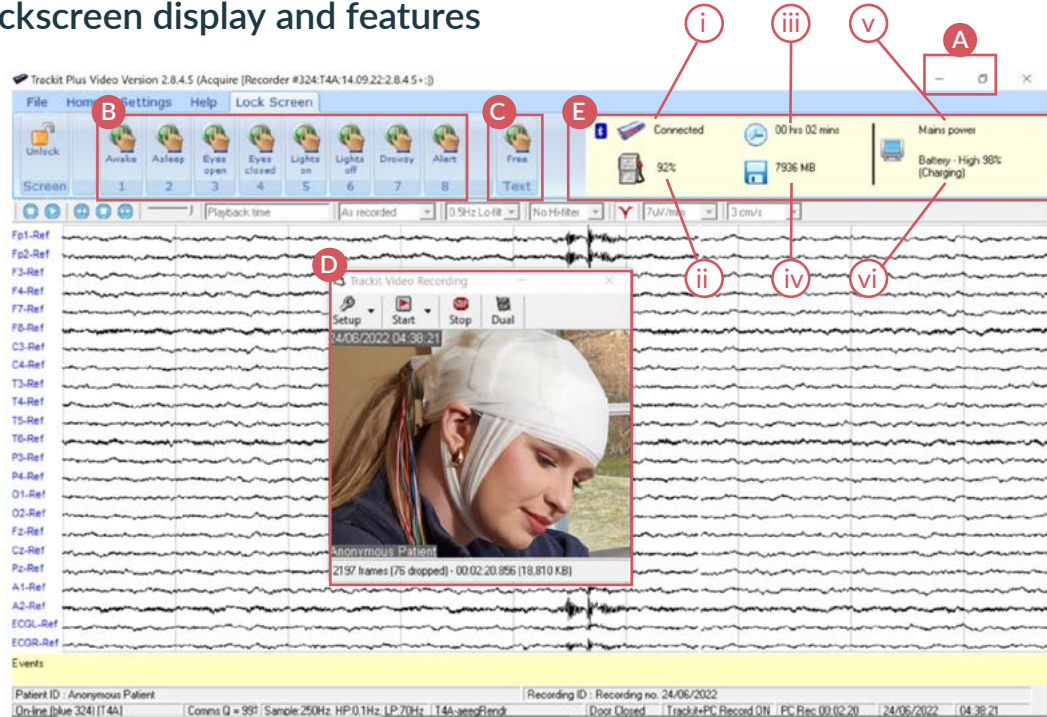

Lockscreen

During a recording, a Lockscreen can be invoked to disable options available to the patient.

It is available from the main Home tab right-hand side as follows:

Lockscreen display and features

The special display and limited features available to the patient are as shown below:

A Full-size display – minimize and exit disabled

B 8 configurable patient events

C Free-text event

D Video window – moveable but with all controls disabled, minimize and exit disabled

E Status panel – top right in ribbon area:

i Connection status with Bluetooth marker

ii Battery capacity remaining

iii Recording time

iv Recording MB on the memory card remaining

v Tablet mains or battery power

vi Tablet battery capacity remaining and charging status if on mains

Lockscreen (continued)

Apart from those listed on the previous page, all other controls, menus and ribbon items are disabled.

Information in the bottom status bars and top caption bar is still available and all the usual auto-reconnect Bluetooth features, video segments etc. work as before

> **NOTE:** The EEG will scroll across if turned on before the lockscreen

A password is required to unlock the lockscreen.

Lockscreen (continued)

Lockscreen unlock password

Allows setting a custom Lockscreen
unlock password. Note that there
is a default hidden password of
'lifelinesXX', where XX is the numeric
current day of the month, e.g. 3 or
24 etc. This password always works.
